QUALITY

At New City Door our doors are produced by a leading edge innovative manufacturing process that places our doors at the forefront in quality compared to the highest quality doors available through out the World. Our patented technology used in the manufacturing process enables maximum precision and flexibility unparalleled by any other door. This process also allows New City Door to offer the market one of the most highly sophisticated and solid constructed doors available. Quality, sophistication and flexibility is what you can expect from New City Door.

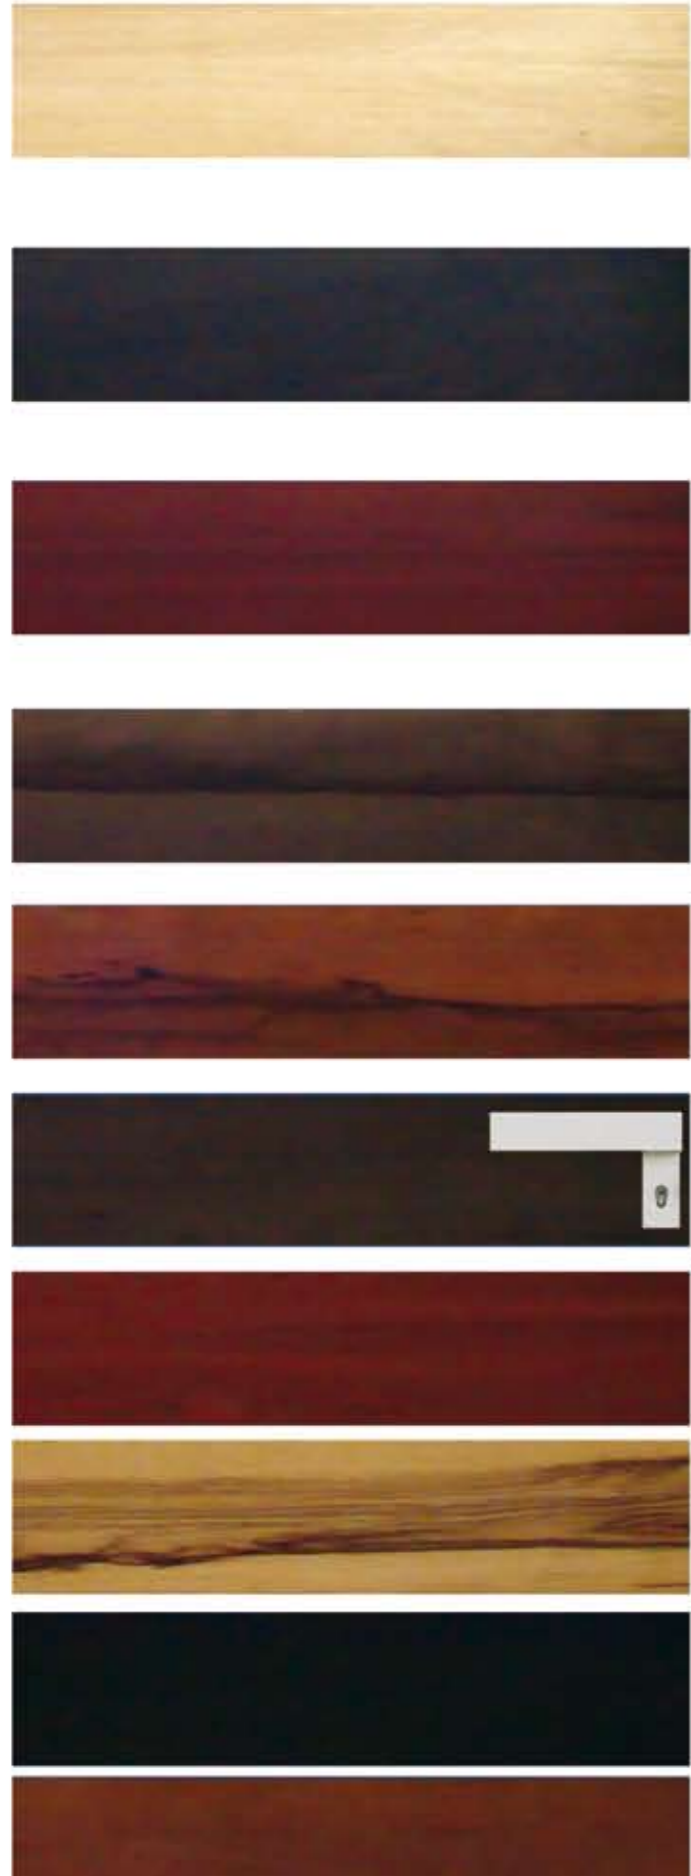

Impressive; definitely. Our doors look and feel sleek and strong, which is no accident, the entry systems are fabricated from composite materials similar to those used in the aircraft industry. Our doors can also be tall and mighty as we have very little restrictions on size. As the saying goes, "If you can dream it, we can build it". New City Door's manufacturing plant is equipped to deal with both standard and nonstandard sizes. Just put us to the test, we will fit your door opening. This is all accomplished without compromising strength, security and beauty.

IMPRESSIVE

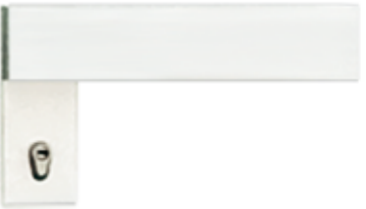

CUSTOM

Not only can New City Door customize the size of our doors to meet your unique and larger than usual opening sizes, but we have many other options as well; as they say “variety is the spice of life”. Imagine being able to change the total look of your door down the road, and where not talking about a new paint job. Our doors are too beautiful to cover up with paint. We are talking about the ability to change the skin coverings of the doors whether it be a wood grain veneer, aluminum or stainless steel. This feature allows the customer to totally change the look of the doors without changing the core of the door, thus stretching the initial investment and offering more flexibility. New City Door offers many skins in moisture-resistant and highly durable materials in numerous attractive colors and designs.

Combining front door with front wall surface to achieve smooth high-tech appearance

Tempered color glass is one of the diverse materials that you can use in combination with our special designs.

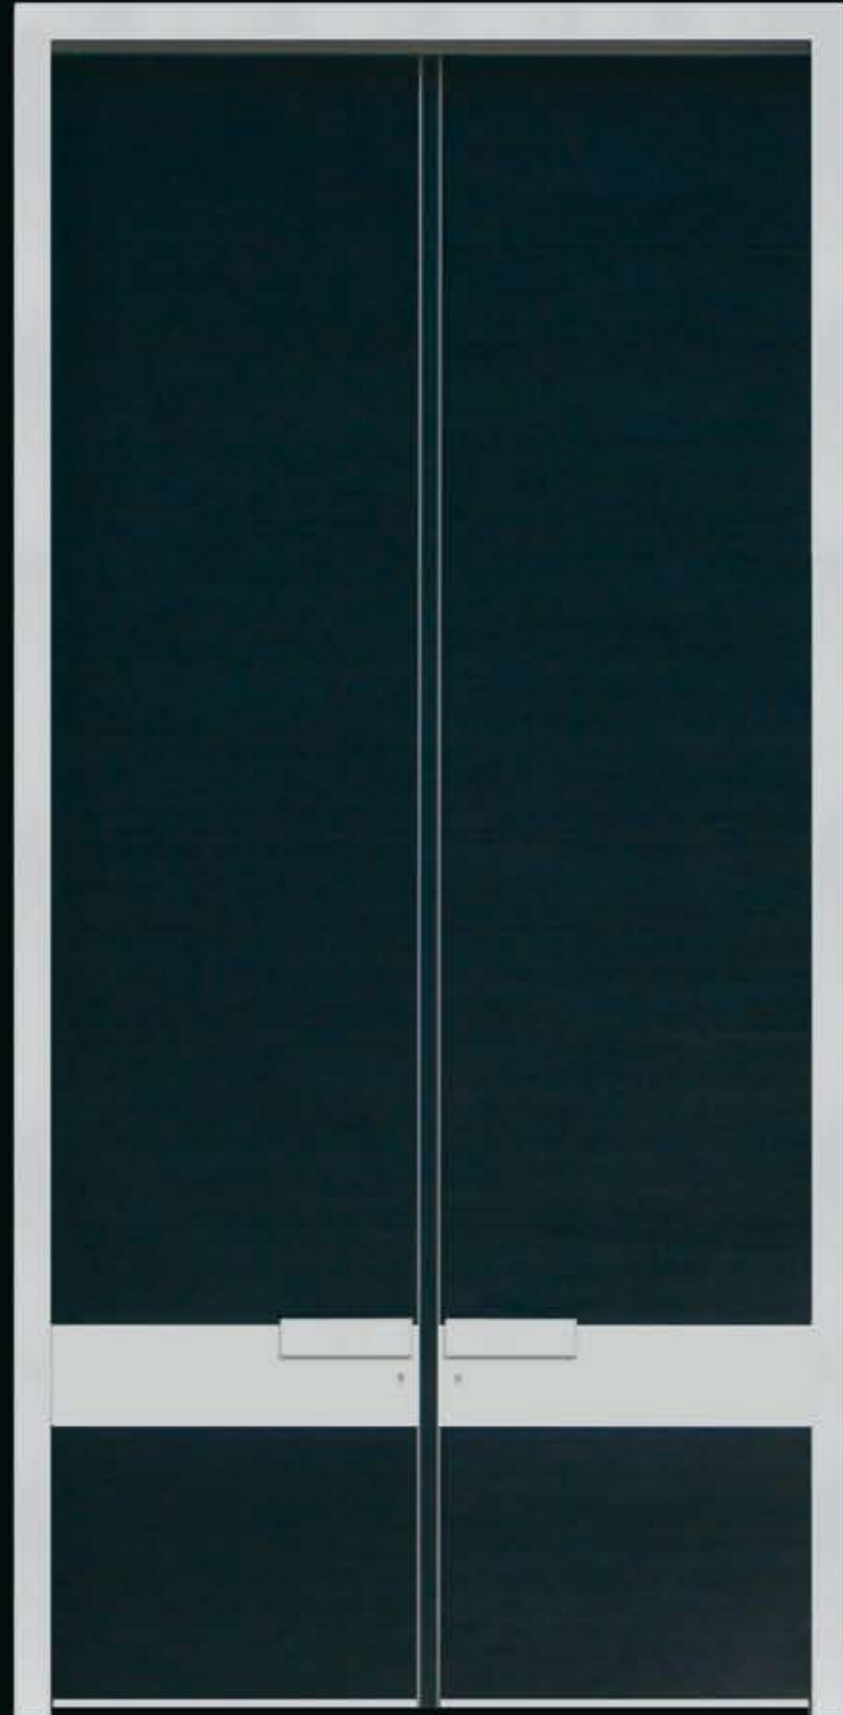

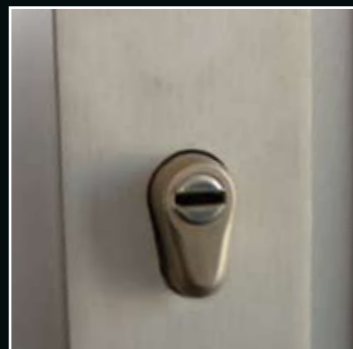

As important is beauty and flexibility to the enjoyment of our doors, advanced and proven security features are just important to New City Door and the safety of its customers. All our doors incorporate the Multilock© lockset mechanism. All of our doors undergo stringent testing procedures and surpass international standards for durability and protection from attempted break-ins.

SECURITY

Mul-T-Lock® high security cylinders have a unique telescopic pin tumbler mechanism with internal and external pins. Both the internal and the external shear lines must be aligned simultaneously in order for the plug to rotate. These features provide an added security dimension and make the Mul-T-Lock cylinder pick-resistant and drill-resistant for high security needs. For more details go to www.multilock.com

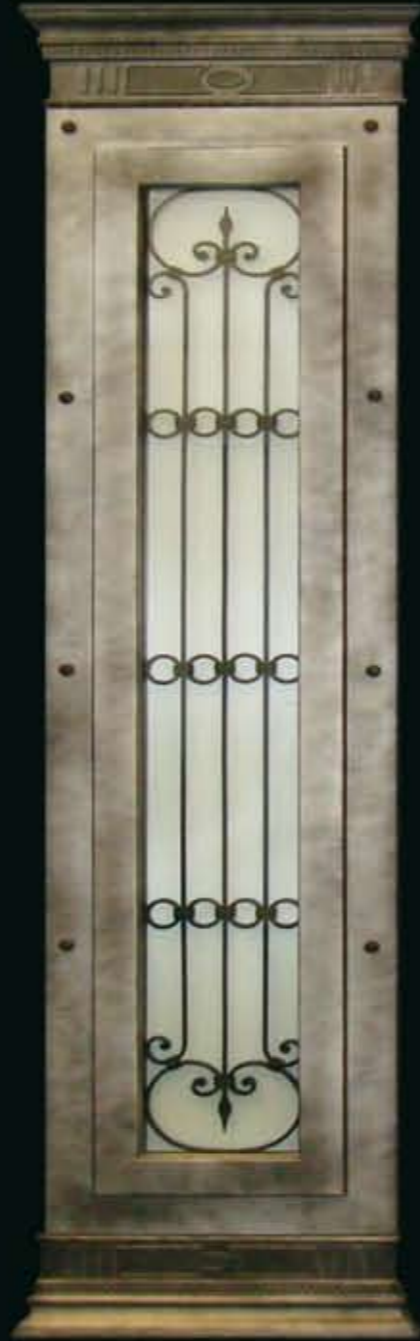

Loyalty is not taken for granted. At New City Door, we realize our customer base is our lifeline. Customer service is therefore of the greatest concern. The Company has established a service network supporting each every customer stating at the design phase, through installation, and of course throughout the warranty period.

Antique

Comes with a distinctive aluminum appearance or an Antique bronze mantle.

HARMONY

The combination of innovative technology, a wide range of beautiful door designs and materials, compliance with the most stringent international quality standards has made New City Door a proven leader in the door industry.

We hope you are impressed from what you have seen in this brochure. There is so much more to see and learn about New City Door. We encourage you to contact your New City Dealer and find out about all the possibilities.
